The Occupational Information Network *(O*NET)*

- **Overview**
 - O*NET Resource Center is sponsored by the U.S. Department of Labor, Employment & Training Administration
 - Central to O*NET is a comprehensive database containing information on hundreds of standardized and occupation-specific descriptors
 - The database is continually updated by surveying a broad range of workers from each occupation

 - **Anatomy of an occupation (Content Model)**
 - The O*NET Content Model describes the unique characteristics of each occupation based on the unique mix of knowledge, skills, and abilities (KSA's) for that occupation
 - KSA's are identified by measurable descriptors that take into account the day-to-day aspects of each occupation and the qualifications and interests of the typical worker

 - **Based on the Standard Occupational Classification (SOC) taxonomy**
 - **Real-world information is collected from job incumbents and occupation experts on 974 occupations to keep up with the changing occupational landscape**
-

An Example: Application Software Developers
