# A Brief History of Artificial Intelligence

# Artificial Intelligence Defined

## Federal Definition

- A machine-based system that can make predictions, recommendations, or decisions influencing real or virtual environments. (15 U.S.C. 9401(3))

## U.S. General Services Administration

- Mimics behavior through technologies combining “math, computer science, and cognitive science.” (IT Modernization Centers of Excellence)

	Natural Language Processing (NLP)	<ul style="list-style-type: none"><li>• Focuses on enabling computers and digital devices to recognize, understand, and generate text and speech.</li></ul>
	Generative Artificial Intelligence (GenAI)	<ul style="list-style-type: none"><li>• Models that can generate text, images, and other content based on their training data.</li></ul>

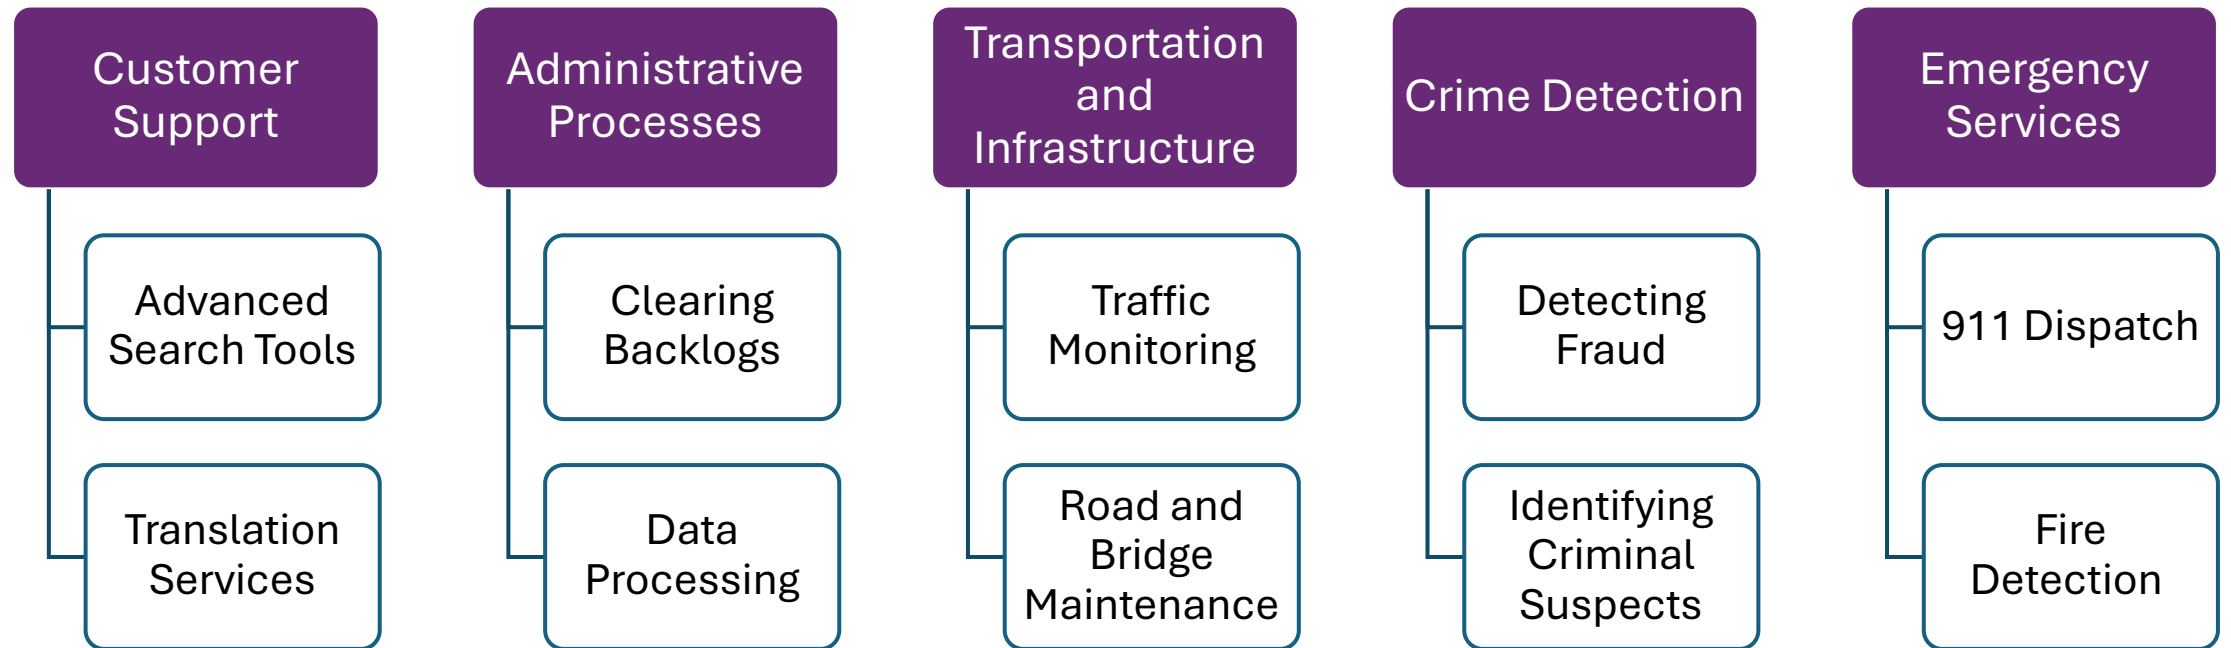

# Artificial Intelligence vs. Automation

# How Have State Governments Leveraged Artificial Intelligence?

# Artificial Intelligence Uses in Government

# Possible Benefits and Considerations

## Benefits

- Reduced Response Times
- Resource Optimization
- Enhanced Access
- Improved Efficiency
- Reduced Human Error
- Streamlined Processes

## Considerations

- Inaccuracies
- Liability
- Biases
- Job Displacement
- Security and Privacy
- Human Oversight

# Artificial Intelligence in Election Activities

## Key Trends

Voter Registration  
Management

Chatbots Providing  
Voter Information

Signature  
Verification  
Technology

Campaign Practices  
(Political Advertising,  
Public Opinion  
Polling, and  
“Deepfakes”)

# How are State Legislatures Responding to Artificial Intelligence?

**- Key Policy Trends -**

# State Legislative Trends

## – National Conference of State Legislatures (NCSL) –

“State governments across the country are starting to use or examine how AI can be used to improve government services such as enhancing customer service; improving health care facility inspections; and improving roadway safety. Legislators, industry and other stakeholders have engaged in robust discussions regarding the concerns about potential misuse or unintended consequences of AI.”

In 2025, “all 50 states, Puerto Rico, the U.S. Virgin Islands, and D.C. introduced AI-related legislation.”

“Thirty-eight states adopted or enacted around 100 measures this year.”

- SOURCE: *Artificial Intelligence 2025 Legislation*, National Conference of State Legislatures, July 10, 2025.

# State Legislative Trends

Requires inventories of AI usage in government or creates AI studies

Creates governance bodies

Establishes state guidelines, parameters for school safety, criminal penalties, and new definitions relating to AI

Requires oversight, human review, audits, and disclosures when AI systems are used in government settings.

# State Legislative Trends (continued)

Clarifies ownership of AI-generated content and addresses intellectual property

Requires certain risk management policies and standards

Provides for worker protections, including the displacement of workers due to AI or the unfair use of AI in employment decisions, and ensuring that AI systems do not impact existing collective bargaining agreements

Requires the disclosure in the use of Automated Decision Systems in employment matters

# State Legislative Trends (continued)

Enhances criminal penalties, including the expansion of stalking/harassment laws to include use of AI or AI-powered robots

Laws addressing non-consensual or fraudulent uses, defamation, and misleading content in elections (deepfakes and synthetic media)

Limits or regulates the use of AI by health insurers (especially for denying claims or for prior authorizations)

Requires human review or clinical peer review when certain AI or algorithmic tools are used in health care settings

Requires some AI/deep learning model developers to report energy usage

# Legislative Trends for AI in Elections

Most states that have regulated AI in elections have addressed the use of AI in campaign practices, including political advertising, forgery in campaigns, the use of artificial, “deceptive,” or synthetic media, and AI use disclosures.

According to the National Conference of State Legislatures (NCSL), “26 states have enacted laws regulating the use of political deepfakes. States have generally taken two approaches: prohibitions and disclosures.” Moreover, NCSL notes that two states “prohibit the publication of political deepfakes a certain number of days prior to an election.”

The general “themes” of AI legislation relating to elections are:

Defining what is meant by AI in the context of campaign practices.

Disclosing on campaign materials when AI is used in the creation of such materials.

Prohibiting the publication of “deepfake” media for a certain period of time before an election (MN & TX)

Imposing civil and/or criminal penalties for failure to disclosure or other related violations.

# AI Legislative Approved in Nevada (2025)

<b>AB 73</b>	Requires political ads or communications using synthetic media (altered images, video, or audio) to include a disclosure. Candidates depicted without such disclosure may seek court relief.
<b>AB 325</b>	Requires state and local emergency management plans to ensure that AI does not make final decisions on emergency response and resource allocation. Prohibits public utilities from relying solely on AI to make final decisions regarding service reductions or shutdowns during disasters.
<b>AB 406</b>	Prohibits public schools from using AI to replace licensed counselors, psychologists, or social workers for student mental health services, and bars unlicensed providers (including AI systems) from offering or misrepresenting such care. Requires the Nevada Department of Education to establish a policy on AI use in counseling and mental health services, including methods to evaluate its accuracy and effectiveness.
<b>SB 128</b> (Vetoed)	Among other provisions, prohibits health insurers (including public employee plans) from solely using AI or automated tools to deny, alter, reduce, or terminate prior authorization or coverage for medical or dental care.
<b>SB 263</b>	Expands certain prohibitions and penalties relating to pornography involving minors to include computer-generated child pornography.
