Health and Health Care in Clark County - 2024

Health and Health Care in Clark County utilizes county-level data from the Robert Wood Johnson Foundation's County Health Rankings and Roadmaps project. This county profile was produced by the Office of Statewide Initiatives at the University of Nevada, Reno School of Medicine. The report includes the most current data available on health outcomes, as well as a wide-range of data on health factors influencing those outcomes. Data for Clark County are benchmarked against state and national averages to highlight areas of strength and weakness in Clark County.

Strengths:

- In Clark County, 95% of people lived close to a park or recreation facility.
- Of adults, 14% reported binge or heavy drinking.
- On average, there was one primary care physician per 1,830 people.

Challenges and Opportunities for Growth:

- Of the adult population (age 18 or older), in 31% reported a BMI of 30 or greater.
- Only 32% of female Medicare enrollees received an annual mammography screening.
- When considering households, 20% experienced at least one of the following problems: overcrowding, high housing costs, lack of kitchen facilities or lack of plumbing facilities.

County Health Rankings and Roadmap Model

The County Rankings project emphasizes that a wide range of factors influence how long and how well we live, from education and income, to what we eat and how we move, to the quality of our housing and the safety of our neighborhoods. The model and associated rankings distinguish indicators or measures of health outcomes for today's health, as well as measures of health factors influencing tomorrow's health such as health behaviors, access to clinical care, social and economic determinants, and the physical environment.
